IN THE NEWS

Natural Gas Prices Forecast: Weather, Storage Data to

Last week in U.S. natural gas futures was characterized by notable fluctuations, influenced by diverse market forces. The week commenced with a surge in futures, driven by an upswing in national demand due to cooler temperatures in regions like the Plains and Texas. This initial increase, however, was short-lived as weather forecasts soon predicted milder conditions across most of the U.S., dampening the initial rally. The global LNG market and European LNG imports also played a crucial role midweek. Despite a downward trend in spot LNG prices in North Asia and mixed import patterns in Asia, the U.S. stood out as a significant LNG exporter. High European gas inventories reduced the continent's need for additional LNG supplies, impacting the global market dynamics. Toward the week's end, U.S. natural gas futures re... Steel-Making Giant Seeks U.S. LNG to Secure Gas for

ArcelorMittal, the world's second-largest steelmaker, is looking to sign an agreement with a U.S. LNG exporter as it aims to secure stable supply of natural gas following last year's energy crisis in Europe, the Financial Times reported on Tuesday, quoting sources with knowledge of the plans. Industrial giants in Europe have recently signed LNG supply deals with U.S. companies after the industry was forced to curtail or shut down operations last year as natural gas prices skyrocketed in the wake of the Russian invasion of Ukraine. Europe's heavy industry suffered a lot in 2022 and continues to see much higher energy costs than American industrial firms despite the fact that European energy prices have declined from the record highs of the summer and autumn of 2022. In September last year,... For more info go to <https://shorturl.at/aCKPW>

North America's LNG Export Capacity Projected to Rise

North America's liquefied natural gas export capacity is expected to increase to 24.3 billion cubic feet per day (Bcf/d) by 2027, according to a Nov. 13 report published by the U.S. Energy Information Administration. Currently, North American LNG export capacity stands at 11.4 Bcf/d. The increase in LNG export capacity can be attributed to Canada and Mexico having their first LNG export terminals coming online and the U.S. adding to its current LNG capacity. LNG exports have become more profitable for North American producers since the Russian invasion of Ukraine. Higher gas prices in the UK, European and Asian markets have made profitability margins attractive for North American sellers, amid a structural shift in trading dynamics, following the cessation of Russian pipelined gas to Europ...
