## IN THE NEWS

### Natural Gas Prices Forecast: Futures Dip

US natural gas futures have stabilized on Tuesday, with traders closely analyzing the latest weather forecasts suggesting much warmer-than-normal temperatures in the upcoming days. According to NatGasWeather, the next 15 days are expected to bring exceptionally mild weather across the US, leading to significantly reduced demand for natural gas. Monday saw a sharp decline in natural gas futures, primarily driven by updated weather forecasts indicating milder temperatures. The shift from earlier predictions of a colder winter, which had stoked fears of supply shortages, to now milder conditions, has lessened the demand for heating, resulting in a sell-off in the market. The natural gas market is currently navigating through a phase characterized by high inventory levels due to a mild previous winter and a consistent... For more info go to https://shorturl.at/gKMO7

### Natural Gas drops 10% with COP28 agreement

Natural Gas (XNG/USD) prices are accelerating their decline on Monday with headlines that a COP28 draft agreement is around the corner. The fossil fuels are set to be reduced, in stead of being phased out, after oppositions from oil and gas-producing countries under the lead of Saudi Arabia. It is the first time in history that a country that is organising the COP-gathering, is asking for a less severe agreement in terms of climate control and reduction of usage for fossil fuels. Meanwhile, the US Dollar (USD) is strengthening this Monday with one of its counterparts, the Japanese Yen, weakening again. Its central bank, the Bank of Japan, issued a statement which contradicts earlier comments which drove the Japanese Yen higher against the US Dollar and triggered substantial down moves in t... ### Natural Gas Tailles 5th Straight Week of Losses:

The U.S. Energy Department's weekly inventory release showed a larger-than-expected decrease in natural gas supplies. Notwithstanding the positive inventory numbers, futures settled with a fifth consecutive loss week over week, overwhelmed by high production and predictions of insipid weather-related demand. In fact, the market hasn't been kind to natural gas in 2023, with the commodity trading considerably lower year to date and briefly breaking below the \$2 threshold for the first time since 2020. At this time, we advise investors to focus on stocks like Range Resources RRC, Coterra Energy CTRA and Cheniere Energy LNG. EIA Reports a Withdrawal Bigger Than Market Expectations Stockpiles held in underground storage in the lower 48 states fell 117 billion cubic feet (Bcf) for the week ended...
