

ColdPRO Winter Diesel Program

NOW YOU CAN

Arsenal ColdPRO is a diesel winter additive formulated to provide fuel operability down to -18° F below cloud point. ColdPRO contains a cetane booster for cold starts and a water dispersant to prevent icy accumulation.

CAN YOUR FLEET STAND UP TO THE WINTER COLD?

Winter weather brings the risk of diesel fuel gelling. It could cost your company lost productivity and revenue. Can you guarantee equipment stays running all winter long? **Now You Can**

BIGGER REACH

ColdPRO Winter Diesel Program

MONTHLY FUEL TESTING TO PROTECT YOUR FLEET

Being prepared for extreme cold weather requires knowing the condition of your fueling systems and fuel. The ColdPRO program offers complimentary fuel sample testing and access to Mansfield's market-based testing data.

We recommend fuel testing at least once a month during winter to measure cold flow properties such as cloud and filter plug points. This enables Mansfield to adjust your additive treatments and kerosene blending as needed.

We also suggest checking tank bottoms regularly. This provides insights into the amount of water, sediment, and overall fuel quality of your tanks.

DON'T LET EXTREME WINTER WEATHER SIDELINE YOUR FLEET

As fuel temperatures decline, waxes in diesel fuel can coagulate - forming crystals that block fuel lines and filters.

Whether you need a high-performing winter additive or a complete winter fuel program, Arsenal ColdPRO can improve your diesel fuel cold-weather performance.

DON'T BE CAUGHT UNPREPARED

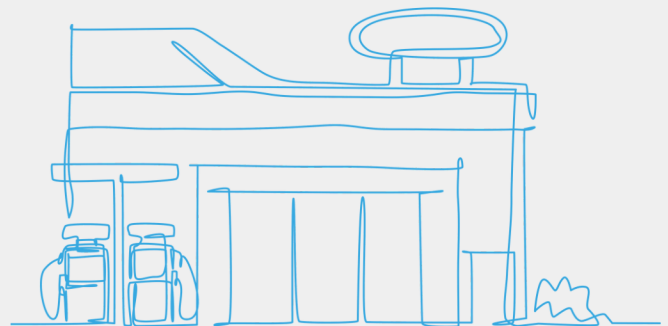

Unpredictable weather can make it challenging to manage emergencies.

Be prepared for unexpected temperature-related engine failures by keeping Arsenal ColdPRO, Dry Tank, and First+AID on hand.

In conjunction with the ColdPRO testing and treatment program, these kits ensure your fleet's operability throughout extreme winter temperatures.

FORTIFY YOUR FUEL

Fortify your fuel to defend against extreme winter weather. Take your cold-weather fuel program up with the Arsenal ColdPRO Complete Winter Fuel Program. It's a cost-effective turnkey solution that provides maximum defense against winter freeze-ups.
