

**HOW CAN  
MANSFIELD  
HELP?**

**How can Mansfield help?** We offer expert strategy consulting, precise emissions reporting, alternative fuel products, and comprehensive credit management.

CRC (Carbon Reduction Certified) is a program that provides a pathway for corporations to meet their sustainability targets while managing their fuel costs.

**INTRODUCING CRC:  
YOUR PATH TO CREDIBLE  
CARBON REDUCTION**

Powered by Mansfield, Carbon Reduction Certified (CRC) is a closed fuel-ecosystem that creates a credible, fully traceable transfer of carbon reduction. The carbon reduction is created through our proprietary instruments which quantify the lifecycle CO<sub>2</sub> emissions of renewable fuel delivered within the Mansfield supply chain. Fossil fuel customers can purchase carbon reduction credits to voluntarily mitigate their Scope 1 and 3 emissions.

**CARBON REDUCTION CERTIFIED BENEFITS:**

-  CRC accelerates Renewable Diesel adoption in non-incentivized markets, benefitting local air quality in regions without low carbon regulation.
-  Customers without direct access to Renewable Diesel fuel can access Renewable Diesel emissions-reduction benefits through our CRC solution.
-  CRC is a third-party verified inset program with annual audits.

**What is Insetting?**

Insetting is when companies invest in carbon reduction products or practices within their own value chain. Carbon Reduction Certified (CRC) *powered by MANSFIELD*, provides an effective and transparent pathway for delivering against ambitious climate commitments. By participating in the CRC program, you can actively reduce your carbon footprint and contribute to a sustainable future.
