ARSENAL ColdPRO

MANSFIELD

WINTER DIESEL PROGRAM

OCTOBER 15 - MARCH 31

TURNKEY PROGRAM NATIONWIDE

The ColdPro Winter Diesel Program is designed to prevent the gelling of Ultra Low Sulfur Diesel Fuel #2 (ULSD) in a cost-effective manner.

The program addresses the challenges posed by the limited supply and the high costs of using kerosene or ULSD #1, traditionally utilized for winter operability.

With the ColdPRO Program, all of your sites will automatically receive treated diesel fuel based on their location and prevailing weather conditions in their region. Ready to keep your trucks running smoothly, even in the harshest winter conditions? NOW YOU CAN

PREPARE YOUR TANKS

Proper tank maintenance is essential for effective winter fuel blending. Tanks should maintain an appropriate Cold Filter Plug Point (CFPP) and be free from sediment and water.

Testing

A robust winter fuel plan begins with knowing what's in your tank

Treatment

Once you've tested your tank, you'll know what treatment you need.

ON-SITE EMERGENCY ADDITIVES

With our on-site emergency additives, you 'll be prepared for any emergencies caused by supply disruptions or weather events.

EMERGENCY RELIQUIFIER

Emergency anti-gel, De-icer, Reliquifier

Restores gelled fuel to its optimal liquid state, prevents future gelling or icing, removes water, and protects against corrosion.

ARSENAL COLDPRO

Winter Diesel Fuel Additive

Provides fuel operability down to -20°F when properly blended, while also providing power boost, detergency and lubricity.
