IN THE NEWS

Nat-Gas Prices Climb on Smaller Storage Build

However, nat-gas prices gave up most of their advances Thursday on forecasts of cooler US weather, which could reduce nat-gas demand from electricity providers for air conditioning. The Commodity Weather Group said Thursday that forecasts shifted cooler, with above-average temperatures now covering a smaller portion of the South and Southeast from September 22 to October 1. Monday's rally in European gas prices to a 3.75-year high has provided carryover support to US gas prices.... https://tinyurl.com/36hy8h3k

Data Centers Will burn more Nat-Gas than small Nations

Gas consumption to produce electricity for data centers is expected to grow by 15 billion cubic feet per day in the ten years to 2035, even accounting for many currently planned projects never being built, BloombergNEF said. That's more gas than is currently consumed by all nations except China, Russia, Iran and the US itself, according to data from the US Energy Information Administration. It's also more than double BloombergNEF's previous forecast in December of 6.9 billion cubic feet per day.... For More info go to https://tinyurl.com/mr26rz2t

25% of all US Nat-Gas came from TX in 2025

A recent report showed Texas was the number one producer of all U.S. natural gas in 2025 while Oklahoma's share was only one-sixth of what the Lone Star State produced. Texas produced 13,603 Bcf of natural gas last year while Oklahoma was the 7th ranked state with 2,880 billion cubic feet of withdrawn natural gas during the same time. U.S. gross natural gas withdrawals reached 47.7 trillion cubic feet in 2025, with a small group of states accounting for most of the total.... For more info go to https://tinyurl.com/2bppuhxp
