IN THE NEWS

U.S. natgas futures up 2% on output drop, forecast for more demand

U.S. natural gas futures rose about 2% on Tuesday on a preliminary drop in daily output and forecasts for more demand this week than previously expected due to an increase in pipeline exports to Mexico. That price increase came despite forecasts for less hot weather over the next two weeks that will reduce air conditioning use next week. Also weighing on prices was the ongoing outage at the Freeport liquefied natural gas (LNG) export plant in Texas, both of which leaves more gas in the United States for utilities to inject into stockpiles for next winter.

EIA/GASNGAS/POLL Freeport LNG, the second-biggest LNG export plant in the United States, was consuming about 2 billion cubic feet per day (bcfd) of gas before it shut on June 8. Freeport expects to return the facility to at least partial service in early October.... For more info go to <https://bit.ly/3bQT3QY>

U.S. natgas output to hit record highs in 2022 - EIA

U.S. natural gas production will rise to a record high in 2022, the U.S. Energy Information Administration (EIA) said in its Short Term Energy Outlook (STEO) on Tuesday. EIA projected dry gas production will rise to 96.59 billion cubic feet per day (bcfd) in 2022 and 100.02 bcfd in 2023 from a record 93.55 bcfd in 2021. The agency also projected gas consumption would rise from 82.97 in 2021 to 85.16 bcfd in 2022 before sliding to 83.84 bcfd in 2023. That compares with a record 85.29 bcfd in 2019. The EIA's latest supply projection for 2022 was higher than its July forecast of 96.23 bcfd, while its demand projection was lower than its July forecast of 85.85 bcfd. The agency forecast average U.S. liquefied natural gas (LNG) exports would reach 11.16 bcfd in 2022 and 12.68 bcfd in 2023, up fr... For more info go to <https://bit.ly/3bQT3QY>

FEATURE: Europe's dash for new LNG import Infrastructure picks up pace

The scramble by countries across Europe to install new LNG import facilities in record time continues to pick up pace, with FSRUs now secured for deployment in a number of EU member states. The sharp fall in Russian pipeline imports – and the prospect of flows from Russia being cut further or halted completely – has led to plans to realize numerous projects, both old and new, as quickly as possible. Most of the plans are for floating LNG import facilities – known as FSRUs (floating storage and regasification units) – which can be installed more quickly than onshore, permanent import terminals. Some 25 new FSRUs are expected to be installed across the EU in the coming years, according to S&P Global Commodity Insights data, with the first facilities already expected to be operational before the end of 2022. Proj... For more info go to <https://bit.ly/3bQT3QY>
