IN THE NEWS

Arctic Cold Snap Could Push U.S. Natural Gas Prices Higher

Forecasts of frigid temperatures later this month sent U.S. natural gas prices surging in the middle of last week to above \$4.85 per million British thermal units (MMBtu)—the highest level since November. If the cold snap expected over the next two weeks holds and forecasts for additional Arctic blasts this winter materialize, natural gas at the Henry Hub could surge to above \$6/MMBtu again, in a pattern similar to the one from the winter of 2014, when the polar vortex drove demand high and pushed up prices, analysts say. U.S. natural gas prices were on a rollercoaster ride last week, surging by 14 percent on Wednesday to a six-week high, due to cold weather, before retreating by 12 percent on the following day “on the prospect for weather turning milder and after the weekly stock draw was in line with expectati... EU's Imports Of U.S. LNG Five Times Higher Than Russian Supply

So far this month, the European Union has received U.S. natural gas volumes five times higher than Russia’s pipeline deliveries, according to Polish outlet rp.pl, the first time in history in which American LNG has surpassed Russian gas deliveries. Last month, at least 30 tankers with liquefied natural gas from the United States were headed to Europe, where the gas and energy crisis pushed regional LNG prices way above the Asian LNG benchmark and 14 times higher than the U.S. Henry Hub price. At the same time, Russian gas deliveries have been lower than usual in recent weeks. Low Russian supply and cold weather have been the two main drivers of rising gas prices in Europe in recent weeks when Russia’s deliveries via Poland and Ukraine have been lower than historical norms. Low natural gas ... For more info go to <https://bit.ly/3FEZuiA>

3 Key Trends Driving Natural Gas In 2022

The oil sector has been hogging the investment limelight after a spectacular recovery that has set the sector as one of the top performers in 2021. However, it's natural gas bulls who have been having a real ball with natural gas trading at their highest levels since 2014, outpacing oil and many other commodities. The natural gas sector is off to another good start, with natural gas prices (Henry Hub) up 20% to \$4.19/MMBtu since the beginning of the year, thanks to robust demand. Natural gas prices have popped nearly 10% over the past few days after updated weather forecasts called for freezing temps in the northeast for the duration of January. The forecast comes on the back of winter storms hitting the east coast over the weekend, driving Algonquin city-gate nat gas prices as high as \$24/MMBtu. Many New England ...
