## IN THE NEWS

**Shutdown Extended of Fire-Damaged Texas LNG Export Site**

Freeport LNG expects partial operation to resume in early September at its \$13.5-billion liquefied natural gas plant and export terminal in Freeport, Texas, following a June 8 gas leak-triggered fire and explosion in its piping system. But the firm said it could take until the end of 2022 for all repairs and regulatory clearances to enable full operation of the facility—which accounts for about 20% of total U.S. export capacity and about 4% of global capacity. The shutdown has already generated unease in key LNG supply markets, particularly in Europe. The gas release at the plant, located on Quintana Island south of Galveston, created a natural gas vapor cloud that exploded and set fire to nearby piping insulation and cabling in the pipe racks that support gas transfer from storage tanks to the dock on the interco... **U.S. LNG Exports Deliver Energy Security, Economic Stability in Europe**

Despite challenges in securing reliable energy sources, Europe still plans to meet net-zero 2050 goals outlined in the European Green Deal. The journey to net-zero is filled with uncertainty as Russia continues to cut energy supply to Europe and additional infrastructure becomes necessary for LNG imports from allies. Stepping up to the plate to meet this challenge, U.S. LNG has become a powerful stabilizing tool in Europe as the region works to increase its supply of natural gas, lower greenhouse gas emissions and wean itself off natural gas from authoritarian regimes like Russia. Evident that U.S. LNG could deliver on these goals, leaders from the United States and Europe announced a deal in March that will see the U.S. commit to boosting LNG supplies to Europe by winter, helping Europe r... **This Oil Giant Just Shipped Its First LNG Cargo**

Iraq has entered the market for liquefied natural gas, with its first shipment ever taking place this week. In a statement, the Iraqi Oil Ministry said that the first shipment was an achievement and quoted the managing director of Basra Gas Company, Malcolm Mayes, as saying it was a "historic moment". The international LNG market has heated up in the past few months as Europe, a major importer of gas, seeks to reduce and eventually eliminate its reliance on Russian pipeline gas. LNG has emerged as the most convenient replacement, and the United States as the biggest supplier so far. Europe has become the top destination for U.S. liquefied natural gas, but the recent explosion at Freeport LNG has compromised the security of future volumes. Looking for diversification, the European Union also recently sealed a deal ... For more info go to <https://bit.ly/3QFNHro>
