IN THE NEWS

US LNG Projects Goes Ahead as Long-term Buyers Line Up

Mounting concerns over energy security are driving global LNG buyers to sign long-term supply contracts—revitalizing the outlook for US LNG projects that have been under development. With Russia's invasion of Ukraine exacerbating a tight market for natural gas globally and demand from Asia expected to remain strong, the world's growing need for LNG has shifted the playing field in favor of LNG developers. The turnaround is particularly striking compared to 2020 when many buyers of US LNG were cancelling cargoes. Today's note discusses the strengthened outlook for US LNG and positive developments in recent months that are paving the way for additional export capacity.. The strength in LNG markets has spurred a resurgence in long-term offtake agreements, which are key to advancing LNG export projects towards Final I... For more info go to <https://bit.ly/3NgBd6g>

Factbox: Europe takes action in case Russian gas supply stops

Several European countries are putting plans in place to manage gas supply and even ration power in case Russian gas flows stop after supply through the Nord Stream 1 pipeline were curtailed. Russian gas supply to Europe via the pipeline fell last week and Moscow said more delays in repairs could lead to suspending all flows. The European Union has rules to prevent and respond to a disruption in gas supplies. It sets out three levels of crisis: an early warning, alert and emergency. Member states are required to have plans in place for how they would manage the impact of a supply disruption at the three crisis levels. In an emergency, governments can intervene only if market-based measures are insufficient to ensure supplies to households and to customers providing essential services. Aust... U.S. Oil And Gas Exports Are Fueling Higher Domestic Prices

The U.S. oil and natural gas industry long fought for and in the last decade finally won release from federal restrictions that limited exports. The ostensible reason was that because of the so-called "shale revolution" in the country's oil and gas fields, the United States would have plenty of oil and gas to spare for export. The real reason behind the push was that the oil and gas industry wanted what almost every other industry in America already had: The right to sell their products to the highest bidders no matter where they lived on the globe. This made it almost certain that as U.S. prices rose to match world prices, U.S. consumers would feel the pain. And, since energy prices affect everyone who votes, they are always politically consequential. So, it is unsurprising that with U.S. regular gasoline prices ...
