## IN THE NEWS

**Germany hopes to import LNG from Canada to speed transition away from fossil fuels.**

German Chancellor Olaf Scholz used a meeting with Canadian Prime Minister Justin Trudeau to push for closer energy ties as his ruling coalition in Berlin races to find alternatives to Russian fossil fuels. Germany hopes to import liquefied natural gas from Canada to help replace the Russian gas it still relies on for more than a third of its imports, down from about half before the invasion of Ukraine. Germany and Canada have been discussing options for an LNG terminal on Canada's east coast to export to Europe, German officials said. Meeting Monday on the sidelines of the Group of Seven summit in Bavaria, Scholz and Trudeau discussed how to maintain pressure on President Vladimir Putin and cut reliance on Russia for energy. "The two countries will cooperate even better than they already do," Scholz said, standing ... For more info go to <https://bit.ly/3a3kF4r>

**U.S. natgas down 7%; Freeport LNG outage leaves more fuel for storage**

U.S. natural gas futures dropped about 7% on Thursday to a 12-week low, as the shutdown of Freeport's liquefied natural gas (LNG) export plant in Texas allowed utilities to stockpile more fuel than expected even as hotter weather had generators burning more gas to keep air conditioners humming. The U.S. Energy Information Administration (EIA) said utilities added 82 billion cubic feet (bcf) of gas to storage during the week ended June 24, exceeding the 74-bcf build analysts forecast in a Reuters poll and increases of 73 bcf in the same week last year and a five-year (2017-2021) average increase of 73 bcf. Last week's build boosted stockpiles to 2.251 trillion cubic feet (tcf), or 12.5% below the five-year average of 2.573 tcf for this time of the year. Freeport, the second-biggest U.S. LNG export facility, is expected to resume operations in late July. For more info go to <https://bit.ly/3a3kF4r>

**In The Midst Of Recession, How A Hot Summer May Impact Commodities**

In a recent interview on Bloomberg TV (see here), I painted a longer-term bearish view in commodities. In fact, I began becoming concerned three weeks ago about the potential wash-out in cotton, grains, natural gas and other commodities; even Bitcoin (BTC-USD). Why? A flight to safety by investors who I expected would "cash in" on profits in many markets. This has indeed already happened, and now potential weather problems are beginning to help some commodities like natural gas (UNG) and soybeans (SOYB) rally back. My concerns about how a potential global recession could have on commodities are featured in my latest issue of Climatelligence. Natural gas prices bottoming on upcoming big-time heat. One of the most volatile and difficult commodities to trade for months has been natural gas. Following a stellar 100% p... For more info go to <https://bit.ly/3a3kF4r>
