IN THE NEWS

U.S. natgas futures jump 6% as LNG feedgas hits...

U.S. natural gas futures jumped about 6% on Monday to a two-week high as the most gas in seven weeks flowed to U.S. liquefied natural gas (LNG) export plants, prompting worries about how much was left to go into storage. With much higher European prices attracting LNG tankers from around the world, the amount of gas in U.S. storage compared to normal levels for this time of year has fallen below the amount available in Northwest European stockpiles. European prices remain about triple U.S. prices, but were trading at their lowest level since before Russia invaded Ukraine on Feb. 24, partly because stockpiles in Europe are filling fast. U.S. front-month gas futures NGc1 for June delivery rose 46.3 cents, or 5.7%, to \$8.546 per million British thermal units (mmBtu) at 12:09 p.m. EDT (1609 GMT), putting the contract ... Germany is keen to pursue gas projects with Senegal...

Germany wants to intensively pursue gas and renewable energy projects with Senegal, Chancellor Olaf Scholz said on Sunday during his first trip to Africa, against the backdrop of the war in Ukraine and its impact on energy and food prices. Scholz kicked off the three-day tour in Senegal, which has billions of cubic metres of gas reserves and is expected to become a major gas producer in the region. Germany is seeking to reduce its heavy reliance on Russia for gas following the Kremlin's invasion of Ukraine. It has initiated talks with the Senegalese authorities about gas extraction and liquified natural gas, Scholz said. "It is a matter worth pursuing intensively," he said at a news conference with Senegalese President Macky Sall, adding that progress in the talks was in the two countries ... U.S. Natural Gas Prices Are Set For A Sustained Rally

Warmer than usual spring weather, expectations of a hotter summer, and record LNG exports to help Europe reduce dependence on Russian gas could send the U.S. benchmark natural gas prices to above \$10 per million British thermal units (MMBtu) in the coming weeks, analysts say. Earlier this week, the front-month Henry Hub benchmark price hit a 13-year high of over \$8/MMBtu, as prices rallied amid increased demand for air conditioning. As of 9:50 a.m. EST on Friday, the natural gas price was at \$8.693/MMBtu, down 1.02% on the day. Moreover, the levels of natural gas in storage across the United States are well below average for this time of the year. The southern U.S. will be very warm to hot with highs of 70s to 90s, including highs near 100 °F across ... For more info go to <https://bit.ly/3ysupis>
