

ColdPRO Winter Diesel Program

- ✓ Turnkey Program Nationwide
- ✓ Consistent & Accurate Treatments
- ✓ Minimize Kerosene Costs
- ✓ Nationwide Fuel Testing

Emergency Kits for Added Protection

ColdPRO

Cold Flow Improver
Cetane Boost
Detergency Improver

DRY TANK

Water Dispersant
Water "Anti-Freeze"
Eliminates Ice

FIRST AID

Emergency Anti-Gel
De-Icer
Reliquifier

Emergency Kits

Small Arsenal Fleets

1-12 Vehicles

2 Cases First+AID
1 Case Dry Tank
2 Cases ColdPRO

Large Arsenal Fleets

12-50 Vehicles

4 Cases First+AID
1 Case Dry Tank
4 Cases ColdPRO

Prepare Your Tanks for Winter

Step 01 Testing

A robust winter fuel plan begins with knowing what's in your tank.

EPA studies show 83% of fuel tanks have corrosion or microbial growth, yet many tank owners remain unaware.

Call Mansfield today to schedule a fuel test, so you can be confident your fuel will hold up against the cold.

Step 02 Treatment

Once you've tested, you'll know what treatment you need.

For excess water, Arsenal Dry Tank can disperse water to prevent icing during freezing weather.

For microbial growth, a biocide treatment or fuel polishing may be necessary to prevent excessive filter clogging when fuel clouds.

Step 03 Preparation

Even the best strategy can be disrupted by a surprise winter storm or a regional refinery quality issue.

Be prepared – order an emergency kit to ensure you have adequate supplies of cold flow enhancer, emergency de-icers, and water dispersants.
