IN THE NEWS

EIA sees rising US gas demand, exports pushing up winter Henry Hub prices— Rising domestic demand for natural gas and improved LNG exports heading into the winter are likely to combine with declining production to push up Henry Hub spot prices to average \$3.38/MMBtu in January 2021, the US Energy Information Administration

- EIA sees rising US gas demand, exports pushing up winter Henry Hub prices
- Tacoma: new LNG hub comes to North America's west coast
- U.S. natgas on track to hit highest price since November as hurricane shuts output

said Oct. 6. In its October Short-term Energy Outlook, EIA also forecast that spot gas prices would stay above \$3.00/MMBtu throughout 2021. Total market production was estimated to decline from an average of 100.04 Bcf/d in 2019 to 93.88 Bcf/d in 2020 and 94.38 in 2021, although the levels were up from the prior forecast. EIA raised its fourth quarter production estimate by 2.15 Bcf/d to 96.48 Bcf/d and its Q1-21 production forecast by 1.24 Bcf/d to 94.04 Bcf/d. Tacoma: new LNG hub comes to North America's west coast— A deep-water, major shipping hub in the US Pacific Northwest, the Port of Tacoma will soon be home to a new LNG facility capable of refuelling marine vessels. Jointly owned by Washington State utility Puget Sound Energy (PSE) and its commercial, sister company Puget LNG, Tacoma LNG has achieved several industry 'firsts' since its ground-breaking on 1 November 2016. One of these 'firsts' is that when it opens in Q2 2021, Tacoma LNG will be the first LNG bunkering terminal on the west coast of North America. Moreover, it will serve a shared function, providing LNG for Puget LNG's commercial customers, and the necessary natural gas reserves for PSE's utility customers. U.S. natgas on track to hit highest price since November as hurricane shuts output— U.S. natural gas futures were on track to hit their highest since November on Tuesday as liquefied natural gas (LNG) exports keep rising and producers shut Gulf of Mexico wells ahead of Hurricane Delta. That move higher came despite forecasts for milder weather and lower domestic demand over the next two weeks than previously expected. Delta is expected to strengthen into a major hurricane before slamming into the Gulf Coast between Louisiana and Florida on Friday. Front-month gas futures were up 2.5 cents, or 1.0%, at \$2.640 per million British thermal units at 8:49 a.m. EDT (1249 GMT), putting the contract on track for its highest close since November. On Monday, the front-month closed at its highest since Aug. 31. For more on this story visit reuters.com or <https://reut.rs/3lriwiV>.
