IN THE NEWS

U.S. natural gas consumption forecast to jump in 2022

Germany is nationalizing Uniper, its biggest importer of natural gas, as part of an €8 billion (\$7.9 billion) plan to prevent an energy shortage this winter. Europe has been hit by soaring natural gas and electricity prices as a result of Russia's invasion of Ukraine and its throttling of gas supplies. The German government will hold around 99% of Uniper after injecting new capital and buying out its Finnish parent company Fortum (FOJCF), German Economy Minister Robert Habeck told journalists in Berlin on Wednesday. Uniper provides 40% of the country's gas supply and is crucial for large companies and private consumers in Europe's biggest economy. In July, Chancellor Olaf Scholz announced the government would step in to bail out Uniper with a package worth up to €15 billion (\$15.3 billion), after it was brought to ... Germany nationalizes its biggest natural gas importer

Mozambique is finally joining the ranks of liquefied natural gas (LNG) exporting countries, with the first shipments from ENI's Coral-Sul 3.4m tonnes/year (t/y) floating LNG project due imminently. But any celebrations over that landmark will be tempered by continuing uncertainties over the future of much larger onshore LNG projects, whose development have been disrupted by violent unrest. Coral-Sul, located safely offshore with its production facility brought in pre-built from South Korea, was supposed to be the low-risk precursor to two more ambitious onshore projects planned for the Afungi peninsula in northern Mozambique. The region is adjacent to the country's substantial offshore gas reserves, which are estimated at some 100 trillion cubic feet, the third largest in Africa after... POLL-U.S. natgas stockpiles seen rising 93 bcf in week to Sept. 16

U.S. utilities likely added a higher-than-usual 93 billion cubic feet (bcf) of natural gas to storage last week, according to a Reuters poll on Wednesday. That injection for the week ending Sept. 16 compares with a build of 77 bcf during the same week a year ago and a five-year (2017-2021) average increase of 81 bcf. In the week ended Sept. 9, utilities added 77 bcf of gas to storage. USOILN=ECI. The forecast for the week ended Sept. 16 would lift stockpiles to 2.864 trillion cubic feet (tcf), about 6.7% below the same week a year ago and 10.7% below the five-year average. The U.S. Energy Information Administration (EIA) will release its weekly storage report at 10:30 a.m. EDT (1430 GMT) on Thursday. There were around 54 cooling degree days (CDDs) last week, which was slightly lower than the 30-year normal of 56... For more info go to <https://reut.rs/3BG1A1M>
